ENVIRONMENTAL POLICY

At Enviro Service Group, our Environmental Policy is founded on our belief that the preservation and conversation of sites that we visit or work on should not be negatively affected. While we can't control the impact to the environment, checks should be carried out to reduce any impact. A restoration of the site will be performed before.

The leading objectives of our Environmental Policy are:

- To deliver customer requirements without any impact to the surrounding environment.
- To conduct operations in compliance with relevant local environmental regulations, licenses and legislation.
- To make environmental awareness a key part of every workers position.
- To insure impact on the environment is considered when planning and work processes.
- To consult with our workers on a regular basis in regards to environmental issues.
- To identify, assess, eliminate or control all potential environmental hazards in the work place through regular assessments and inspections.
- To take a pro-active approach in trying to identify potential environmental incidents before they happen.
- To provide site rehabilitation in the case of any incidents caused that have affected the environment.

The success of our environmental management is based upon:

- The pro-active identification of environmental hazards for all work activities via the HazPak rating. Ensuring all workers and contractors have undertaken a Site Environmental Induction and that these are all recorded.
- Ensuring the site team and sub-contractors are totally committed to achieving our environmental objectives through demonstration and attitude while working on site.
- Encouraging that honest and open communication exists between management and all employees.

Edward Hawach

Director
